5 Ways to Use LiveSafe During Inclement Winter Weather

1 Broadcast Messages

Send broadcast messages to your community to keep them informed.

Use Case: Send a broadcast message via text, email, or the LiveSafe Mobile App to notify employees of weather-related road closures.

2 Report Incidents & Suspicious Activity

Inclement weather can lead to injury, maintenance issues, and other safety and security concerns.

Use Case: Users can report safety hazards (ex: black ice) or facilities concerns (ex: frozen pipes).

3 Check In

Have members of your organization check in on the app so you know that they are safe during bad winter weather.

Use Case: During dangerous storms, send check-ins to users to ensure company safety.

4 Geofence

Create geofences around specific locations to ensure you are reaching the people who at the highest risk for inclement weather.

Use Case: Send different messages to employees who are remote and those in the office.

5 Resources

Upload your organization's inclement weather policies, procedures, and resources to the "Resources" feature in the app.

Use Case: Users can easily access weather-related safety protocols.
