

# Return to Campus During COVID-19

## Higher Education

### **The Customer**

This client is a private Christian liberal arts university located in Washington. This university has an enrollment of over 2,500 students.

### **The Situation**

As this institution welcomed over 1,000 students back to campus, they wanted to ensure that students and faculty remained healthy and safe. In addition to altering move-in protocols and shifting some classes to an online format, the university wanted to ensure that students had an easy means of accessing COVID-19 resources and the ability to report their health status.

### **The Solution**

The university incorporated WorkSafe, LiveSafe's COVID-19 offering, into its reopening plan. Using the LiveSafe Mobile App, community members can easily complete a COVID-19 health screening survey and self-report any symptoms each day before class. LiveSafe also enables students, faculty, and staff to access CDC and campus COVID-19 information, engage in two-way communications with security officials, and request help when needed.

### **The Result**

If community members report any COVID-19 symptoms, they are quickly connected to health resources so that appropriate next steps can be taken. With LiveSafe, this institution is able to mitigate the risk of widespread illness on campus. This makes the students, faculty and staff feel safer and more prepared for a healthy return to school.
