

Vector LiveSafe

Your Safe Workplace Re-entry Solution

Whether your organization has continued in-person work throughout the pandemic, transitioned to remote or hybrid operations, or is actively planning workplace re-entry strategies, Vector LiveSafe is here for you, and focused on keeping your employees and organization healthy, safe, and informed.

Navigate COVID-19 workplace challenges

Vector LiveSafe's re-entry tools make it possible to welcome employees back to work with the knowledge and confidence that they are healthy and protected. Vector LiveSafe offers secure, fast, and easy methods for:

- Automating daily health check-in questionnaires and re-entry verification
- Providing reliable and effective two-way health and safety communication
- Ensuring employees have transparent access to the latest COVID-19 guidance/policies

Protect your organization with reliable daily health verification

Facilitate entry into the workplace by scheduling a daily health questionnaire for employees to complete to self-report COVID-19 symptoms or possible exposure. Results are clearly displayed both on the employee's device and in administrative reports to indicate who can safely report to work.

Address communication needs in a changed workforce

Vector LiveSafe makes it easy to engage employees whether your operations are in-person, remote, or hybrid. Our mass notification platform allows you to communicate both routine and emergency incidents to your employees, and our two-way communication capabilities give employees a secure, private way to ask COVID-19 questions and provide their resources.

Gather actionable security intelligence in a 'new normal'

The Vector LiveSafe Dashboard makes it easy to access employee reporting analytics, meet company-wide health and safety needs, interact with users, and more. This robust functionality empowers organizations to understand their unique risk landscape and make informed, effective safety decisions.
