

# Enforcing Social Distancing and Face Mask Policies

## Healthcare

### **The Situation**

A health care worker noticed that people were congregating by the entrance of the hospital without wearing masks. There were also children near the elevators without masks on. The worker was concerned due to the presence of COVID-19 positive and immunocompromised patients in the hospital.

### **The Solution**

The hospital worker submitted a tip through the LiveSafe Mobile App expressing concern about the lack of mask-wearing and requested that the problem be addressed.

### **The Result**

Security was made aware of the problem and was able to look into ways to better maintain hospital safety and prevent infection spread.

**As of July 2020, U.S. medical centers have reported over five thousand cases of patients likely contracting COVID-19 after being admitted for other conditions.**
